Noise Assessment Report - Southern Interchange Community Agreement - Rev 2, Night

Date: 11/07/23

Created by: [REDACTED]

1. Introduction

This report presents a noise assessment of southern interchange community agreement - rev 2 construction activity which is proposed to occur during the night period (RMS CNVG OOHW2). This report presents the proposed activities, noise prediction results, an assessment against RMS CN requirements and details proposed noise management and mitigation measures.

2. Method

NoiseCheck is a 'front-end' 3-D noise prediction platform which adopts a database of predictions that are generated in third party proprietary software which conforms to ISO9613 Acoustics - Attenuation of Sound During Propagation Outdoors - Part 2: General Method of Calculation implemented to ISO/TR 17534-3:2015 requirements. The predictions consider source to receiver distance and height and the noise attenuation provided by ground and air absorption, topography, surrounding buildings and other solid objects and permanent noise barriers (where applicable). The typical height of plant and equipment is 2m. The noise predictions at surrounding single and double storey properties apply at 1.5m at the most affected facade. Predictions for apartment buildings with greater than two storeys apply at the worst affected floor and facade. This assessment presents the maximum LAeq noise level from all activities.

3. Works description

The work activities that have been assessed are shown in Figure 1. Details of the activities are provided in Table 1. All noise levels referenced are in dBA, Leq,15minutes.

Figure 1. Location of modelled plant and equipment

Table 1. Summary of modelled plant and equipment

Name	Duration	List of equipment	Sound power	Annoyance	Mitigation	Mitigation	Notes
------	----------	-------------------	-------------	-----------	------------	------------	-------
